Do you hold a bachelor's degree, want to learn more about economics and strive for an international career?

Then our English-language master's program in Economics is the perfect match for you. Both in international companies and among public authorities, the demand for high-skilled Economics graduates is increasing. Along with economic expertise, the current challenges require additional abilities, for example in extracting knowledge from large data sets. Our study program satisfies this demand in several ways.

CAREER PROSPECTS

At the beginning of your English-only studies, we will equip you with a solid foundation in formal modelling tools, both theoretical and empirical. Even though the training is methodologically comprehensive, it has a clear focus on applications as well. In the subsequent electives there is a rich choice from a wide range of topics for specialisation, such as Industrial Organization or Competition Economics, Behavioral and Experimental Economics, International Trade and Labour Economics, Monetary Economics, Public Economics, as well as further method-oriented courses, as well as further method-oriented courses.

The program is an ideal starting point for an academic career, in particular for a PhD in Economics, but it also provides a wide range of tools and knowledge that are in high demand in the private and public sector. This creates excellent career perspectives and enables graduates to take on high-level positions in international research institutions, organisations, government agencies / ministries, companies and economic consultancies.

TOP-LEVEL RESEARCH AND INTENSIVE SUPPORT

The Düsseldorf Institute for Competition Economics (DICE) at Heinrich-Heine-University is a unique academic centre for research into the effects of competition and questions of market regulation. In recent years we have brought together a dedicated team of top researchers.

We research at the pulse of time, many of our studies are regularly published in world-renowned journals and presented at international conferences. Moreover, our research regularly finds its way into current policy debates. Our scientists are frequently-asked-for contacts and advisors for politicians, companies and the press.

We operate a state-of-the-art behavioural economics research laboratory where we conduct experiments to investigate whether people behave in every day economic life as the theory suggests. In teaching, we focus on small group sizes and intensive student support. We provide target support in the preparation of seminar presentations and term papers as well as in the processing of project and master's theses.
